

AMENDMENTS

In the Claims:

Claim 1 (currently amended): A heat transfer structure comprising a substrate having a surface thereon and a heat conducting medium on the surface, the medium having a thermal conductivity substantially greater than silver.

Claim 2 (currently amended): The heat transfer structure surface of claim 1 wherein the medium comprises ~~comprising~~ sodium chromate, silver dichromate, and monocrystalline silicon.

Claim 3 (currently amended): The heat transfer structure surface of claim 2 wherein said silver dichromate and said monocrystalline silicon have been treated by a step of magnetic resonating.

 Claim 4 (currently amended): The heat transfer structure surface of claim 3 wherein said monocrystalline silicon is powder during said magnetic resonating step.

Claim 5 (currently amended): The heat transfer structure surface of claim 2 wherein said monocrystalline silicon has a purity greater than 99.999%

Claim 6 (currently amended): A heat transfer structure comprising a substrate having a surface thereon and a heat conducting medium on the surface, the medium having a thermal conductivity which substantially increases above an activation temperature.

Claim 7 (currently amended): The heat transfer surface structure of claim 6 wherein the medium comprises ~~comprising~~ sodium chromate, silver dichromate, and monocrystalline silicon.

Claim 8 (currently amended): The heat transfer surface structure of claim 7 wherein said silver dichromate and said monocrystalline silicon have been treated by a step of magnetic resonating.

Claim 9 (currently amended): The heat transfer ~~surface~~ structure of claim 8 wherein said monocrystalline silicon is powder during said magnetic resonating step.

21
Claim 10 (currently amended): The heat transfer ~~surface~~ structure of claim 7 wherein said monocrystalline silicon has a purity greater than 99.999%
